			Complete in connection with ARCH 6817	U of U Elective 6000 level + <i>3.0 cr</i>	Complete in connection with ARCH 6817	U of U Elective 6000 level + <i>3.0 cr</i>	

MASTER OF ARCHITECTURE / 2 YEAR PROGRAM (5 Semesters)

GRADUATE CURRICULUM

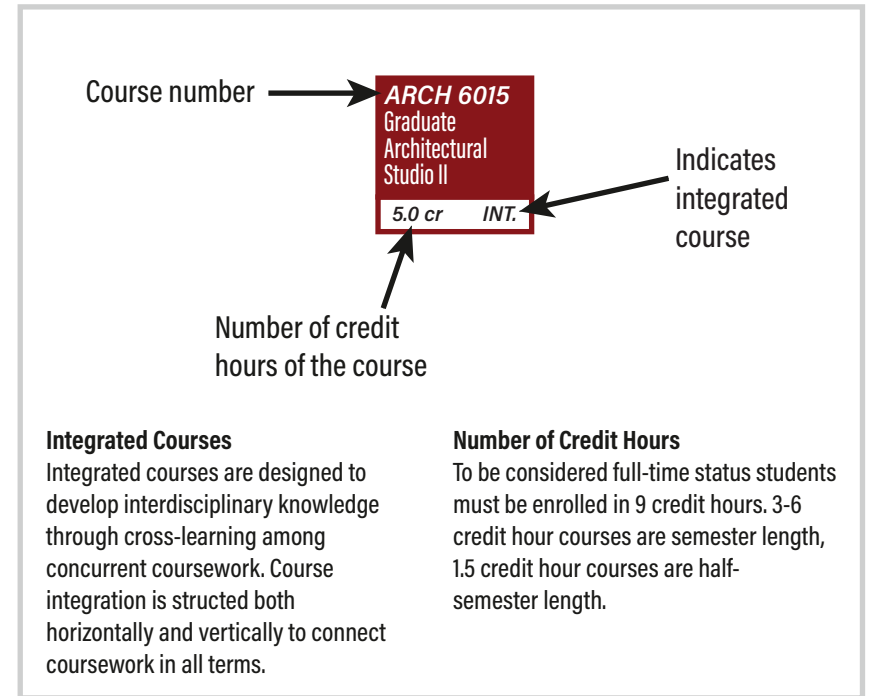

in the **School of Architecture**

The Master of Architecture (M.Arch) is an accredited, professional degree that provides students with a comprehensive education leading to the practice of architecture. The program is completed in five semesters, including one summer; It is designed to allow students opportunities to prepare for specialization in the field in the areas of architectural design and representation, architectural technologies and building performance, digital fabrication, architectural history, society, and culture. Applicants for the 2-year M.Arch program **must** have an undergraduate degree in architecture.

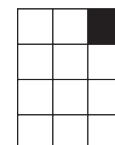

The School of Architecture curriculum is focused on integration and the process of design, research, and thinking. The curriculum makes meaningful connections between the different areas of instruction: design, research methods, history and theory, building technology, communications, and professional practice through the design of a sequence of integrated courses taught collaboratively to illustrate the connections between areas of instruction and the importance of each area for the ethical practice of architecture. At the heart of the curriculum is the recognition that architectural practice is inherently value-laden and that therefore recognition of the values underlying our processes and products is essential in our research and teaching.

The program is organized to allow students to choose an area of focus after the first year, which consists of a foundational sequence focused on the design process, research, professional integration and building technologies. The second year allows the student to choose an immersive experience through our DesignBuildUTAH program, customization to their studies through electives, as well as develop a self-authored masters project. The U of U elective is a mandatory, 6000+ level, 3 credit course taught outside of the college or cross-listed with another college. CA+P electives are optional courses not required for degree completion.

The program is NAAB accredited and possesses a STEM designation.
